

# Rocks: All rocks are made up of minerals

## Igneous Rock

\* Formed from molten rocks that cool & harden

→ Cools Outside  
- Cools quickly  
- small crystals because not enough time to grow

→ Cools Inside  
- Cools slowly  
- Large crystals because time more to grow

## Sedimentary Rock

\* Formed from sediments small pieces of rocks that were weathered & eroded

\* Formed by deposition

Depositing forming horizontal layers

\* Water dissolves minerals which cement → binds the sediments

\* Most Fossils found in these rocks

## Metamorphic Rock

\* Formed from heat & Pressure ↓
